

Environmental Sustainability Charter

At Puratos we are committed to integrating environmental sustainability into the way we operate.

We all have a responsibility to contribute to meeting environmental challenges, in order to preserve the environment for future generations. At Puratos we see this as an opportunity as well, because there is also a compelling business case for saving energy, water and waste. This is why we have taken a comprehensive and result-oriented sustainability approach.

Our goal is to reduce and optimize the use of environmental resources by developing and implementing sustainable solutions with a focus on:

- **Energy** – Efficiency, management system, renewable energy sources;
- **Water** – Efficiency, effective waste water treatment;
- **Waste** – Optimum packaging, reduce/reuse/recycle waste;
- **Responsible sourcing** – Responsible supply chain, sustainable sourcing.

We will also promote and fund specific projects that for their favorable environmental impact are best practices for a global roll out (example: adoption of LED lights).

All affiliates of the Puratos Group will translate key elements of our environmental sustainability strategy in local policies and arrangement. We will ensure that our employees are aware of the role they can play and motivated to act accordingly.
